In accordance with the guidelines for installing water boxes, the following steps should be taken:

1. Install water boxes at the correct locations.
2. Connect water boxes together using approved materials.
3. Use approved valves for flow control.
4. Ensure all connections are secure and leak-free.
5. Regularly inspect water boxes for any signs of damage or wear.
6. Keep all equipment clean and in good condition.

Details:
- All materials must be fit for purpose and comply with local regulations.
- Regular maintenance is required to ensure the system remains operational.

Notes:
- Always follow safety guidelines when working with water boxes.
- Keep a record of all maintenance activities.
- Contact the relevant authorities for any necessary permits or approvals.
